

4.5.3 Test (TS): The Essay: American Masters

Jasper Holton (jholton8743)

April 26, 2015

In response to prompt A:

Lifestyle is a very important part of living. Lifestyle is not just the way you live, but it's the way you fit in with yourself and society. I find that lifestyle is a very essential part of living, and one that is very critical to understand and make sense of in order to be able to properly find my place in society. I have chosen, and live by a lifestyle that I find fits me quite well. The lifestyle of dedication to science and research is one that I find to be beneficial to both my own well being and the well being of society.

I choose to live a lifestyle where I dedicate most of my time to learning and research, which I find to be quite beneficial to myself. With the lifestyle I live, I have a strong focus on both school and my extra curricular activities. I spend a large portion of my time studying for my various classes, and I take some classes at my local university. In addition to this, I have extra curricular activities that relate to learning and research. I work in a laboratory at my local university where I am building an experimental satellite, and I am an intern for a small company that builds and flies unmanned aircraft for scientific missions. This takes up a large portion of my time, which means I have little time for social contact. As such, I have few close relationships and do not have a girlfriend or boyfriend. I dedicate my time to learning and research, and do not leave much time for social contact. This has turned out to be quite beneficial to my life, as I have been able to do a lot of learning and investigation that will be practical for my occupation later in life.

Having this lifestyle will eventually benefit society as well as myself. Even though what I do currently is not really beneficial to society, it will most likely be in the future. I currently work on projects that mostly involve my learning about various areas. I have learned general academic skills, such as reading, writing and mathematics, but I have also learned skills involving computer science, electrical engineering, and software development. I will eventually use these skills to benefit society, either by doing research or using my skills for the industry. I would not have gained these skills without the lifestyle that I choose to live, and thus my having this lifestyle will eventually benefit society.

This sort of lifestyle is essential to society and has been in the past, with the example of Isaac Newton. Newton chose to have very little social life. He did not build

many relationships during his life, and chose not to marry or get involved with women. As such, he had few friends and little social life to involve himself with. Being as he was not focused on his social life, he had plenty of time to focus on other things. He was able to work on his scientific research and investigation, as well as advance his own personal knowledge while learning. This was very helpful for society, as his research ended up being very important. We often refer to Newton's three laws of motion in anywhere from the most basic to the most advanced of physics. This might not have been possible if not for Newton's lifestyle and his devotion to his work. Thus, his lifestyle was essential to society.

This lifestyle is a very important part of my life. I choose to live in a way that most of my time is dedicated to learning and research, and I don't leave much time for social contact. I find this to be quite beneficial to myself, as I have learned a lot and kept myself engaged and entertained. Also, I believe that this lifestyle will also be quite beneficial to society. As I have said earlier in the case of Isaac Newton, this has been quite beneficial to society in the past. I find that my lifestyle, dedicating myself to learning and research, has a positive impact on both myself and society as a whole.
